Farid Farahmand

Software Developer | Montreal, Quebec, Canada
github.com/FaridFarahmandf | linkedin.com/in/farid-farahmand

Profile

Farid Farahmand is a software developer based in Montreal who builds web applications, with a focus on front-end development in Angular, TypeScript and RxJS. He has about three years of professional experience as a front-end developer and holds a Master of Applied Computer Science from Concordia University. He is extending his skills toward AI-powered products, combining his interface work with retrieval-augmented generation and large language models, and he aims to build complete AI applications, from the data pipeline to a polished chat interface.

Education

Master of Applied Computer Science, Concordia University, Montreal - Jan 2024 to Dec 2025
Farid completed his master's degree at Concordia University between January 2024 and December 2025, and his official graduation (convocation) date is May 15, 2026. The program is not AI-focused, but he took graduate courses in Conversational AI, Natural Language Processing (NLP) and machine learning, as well as a course that worked with image processing. He took the Conversational AI course with Professor Mirco Ravanelli and earned an A- in it. In that course he built a Parkinson's disease detection project.

Bachelor of Software Engineering, Azad University (Central Tehran Branch) - Sep 2016 to Jun 2020
Farid earned his bachelor's degree in software engineering at Azad University, Central Tehran Branch, between September 2016 and June 2020.

Professional Experience

Software Developer (Front-End), Sarmad Business Services Company - Aug 2020 to Sep 2023
Farid worked at Sarmad Business Services Company from August 2020 to September 2023, growing from intern to engineer. He built the front end of a customer-facing e-commerce platform and of four other enterprise applications, mostly in Angular with TypeScript and RxJS. He created a shared library of more than 15 reusable UI components that was used in 3 of the company's 5 applications.

At Sarmad, Farid built production dashboards with NgRx state management and real-time data visualization. He reached 70% automated test coverage using Jasmine, Karma and Cypress, and worked with Docker-based CI/CD pipelines. He also used Vue 2 on two of the company's projects.

One of Farid's projects at Sarmad was the front end of a hospital patient intake and triage system. Patients entered their information and symptoms, and the system routed them to the right department and doctor with relevant suggestions.

Projects

RAG Chatbot (Python, LangChain, ChromaDB, Ollama, Streamlit) | github.com/FaridFarahmandf/chatbot-RAG
A retrieval-augmented generation chatbot that answers questions using only the user's own PDF, text and Markdown documents. Documents are split into overlapping chunks, embedded locally with the sentence-transformers model all-MiniLM-L6-v2, and stored in a Chroma vector database. A Llama 3.1 8B model, running locally through Ollama or through Groq's cloud API, generates answers grounded in the

retrieved passages, and the interface shows only the passages the answer actually cites. The project includes an evaluation suite that tests refusals, keyword accuracy, citations and multi-turn questions. Farid built it with an AI coding assistant: he set the goals, designed the tests and found failure cases through his own testing.

Finora, Stock Watchlist Tracker (React 19, Vite, Supabase, PostgreSQL, Clerk)* | *github.com/FaridFarahmandf/finora
A stock watchlist application that tracks near real-time prices from the Alpha Vantage REST API, using rate-limit-aware sequential requests, and shows color-coded daily percentage changes. It uses Supabase with PostgreSQL for storage and Clerk with JWT for authentication.

Real-Time Market Analytics Dashboard (Angular 19+, NgRx, Chart.js)* | *github.com/FaridFarahmandf/Market-Analytics
An Angular dashboard that displays live cryptocurrency market data from the CoinGecko API, with NgRx state management and Chart.js visualizations.

Full-Stack Task Manager (Angular, Flask, Python)* | *github.com/FaridFarahmandf/Task_Manager
A task manager with an Angular front end using route guards, lazy loading and JWT authentication, including an HTTP interceptor that handles expired sessions, and a Flask and Python REST API back end.

React E-Commerce Store (React, Redux, Context API)* | *github.com/FaridFarahmandf/store
An online store built as the final project of a React course, using class and function components, hooks, Redux and the Context API. In 2026 Farid modernized it and added an A/B test on the add-to-cart button with funnel tracking and a live dashboard, a checkout upsell section called "You may also like", and conversion event tracking.

Global Dominion, Strategic Turn-Based Game Engine (Java)* | *github.com/sayemomer/globalDominion
A turn-based strategy game engine written in Java as a team project, applying object-oriented design and Agile development practices.

Skills

Front end: Angular (versions 19 to 21), TypeScript, JavaScript, RxJS, NgRx, React, Redux, Vue 2, HTML, CSS, Bootstrap, Angular Material, Chart.js, responsive and cross-browser UI.

Back end: Python, Flask, REST APIs, Node.js, Java, PostgreSQL, Supabase.

AI: retrieval-augmented generation, LangChain, ChromaDB, sentence-transformers embeddings, Ollama, Groq API, prompt design for grounded answers, RAG evaluation, and daily use of AI coding agents in development work.

Testing and tools: Jasmine, Karma, Cypress, Jest, Git, Docker, CI/CD, Agile.

Cloud: AWS (EC2, S3, Lambda) and Terraform at a fundamentals level.

Certifications and Ongoing Learning

Farid holds Udemy certificates in Angular (Mosh Hamedani) and in REST APIs with Flask and Python (Jose Salvatierra), both completed in 2026. He is currently taking The AI Engineer Course: Complete AI Engineer Bootcamp, and is planning an AI Market Analyst application that extends his Market Analytics Dashboard with LangChain, FastAPI and a vector database.

Languages

Farid works in English and speaks French at an intermediate level, which he continues to develop.
